

## **Bluegrass for Windows**

---

### **Hardware Requirements - SQL**

The following specifications are provided with the understanding that they are based on our experience and that of our customers experience in providing a suitable, minimal hardware environment in which to operate our software. Individual preferences must be considered when evaluating hardware options.

#### **Accounting Workstations (assumes minimal or no dispatching requirement)**

Windows XP Professional  
1.0 GHZ PROCESSOR (1.8 GHZ or higher recommended)  
256MB RAM (512 or higher recommended)  
AGP-based video adapter with 8mb memory  
17" monitor  
Network Card

#### **Dispatching Workstations**

Windows XP Professional  
1.2 GHZ PROCESSOR (2.0 GHZ or higher recommended)  
256MB RAM (512 or higher recommended)  
AGP-based video adapter with 8mb memory  
17" monitor  
Network Card

#### **Network File Server**

2.0 GHZ processor  
1 Gigabyte RAM or higher recommended  
Video adapter with 8mb memory  
Hard disk minimum 40 GB (60 gig or higher recommended)  
RAID Configuration recommended  
External Backup device also recommended

\*\*\*NOTE: If over 25 users, recommend separate server for Bluegrass.

#### **Printers**

We have a wide array of printers being used by our customers. Most of them rely on laserjet printers for reports and checks. However, many DeskJet printers are being used successfully.

#### **Network Environment**

Bluegrass operates successfully in the following modes:

Windows Server 2003 (Standard Edition) or higher (Client Server Configuration with or w/out Domain)

Make sure that all workstations have identical network configurations  
10/100/100 Network transmission rate. GIGABIT is recommended although 100 MBS is acceptable to many customers.
