

Equipment/Vehicle Maintenance Control

A comprehensive vehicle maintenance management package for planning, controlling, and monitoring all of your fleets/equipment operational activities

GPS Vehicle Tracking

Manage your fleet and personal more efficiently with a broad line of vehicle tracking and locating systems.

“For People On The Move”

Your equipment is the baseline for your profitability, but if you are like a large number of contractors, you are only keeping track of equipment cost as a lump item in your accounting system.

Bluegrass Equipment/Vehicle Maintenance Control is a very useful tool if you own trucks and/or heavy equipment. Whether you use the complete package, which includes preventative maintenance, scheduling, and service order generation; or just capture repair costs and hours used, this module will prove a worthwhile investment.

The BLUEGRASS SYSTEM will put a solid cost history at your disposal. Every part purchased and every hour of mechanic time can be charged to an individual piece of equipment with ease.

With the Bluegrass dispatch portion of the system you will have up to the minute information as to location of any piece of equipment you own. You will also have historic information on where the equipment has been. History can be saved and retrieved for any time period. Before sending a mechanic out to the field you can find out what other machines are on the job and what needs to be done on those machines.

When you have several types of equipment, all of which have a different manufacturer, recommended maintenance schedule, tight control of PM can get challenging. The Bluegrass System allows you to establish a different list of requirements for each piece of equipment and will print the work order, listing each requirement when due. A computerized PM program should result in a 10% savings in PM cost.

The Bluegrass System gives you the information to make an intelligent decision instead of an emotional one.

Reports showing revenue generated versus repair cost over any period will point out equipment costing you money. You will be able to say, "Brand A may cost us 5% more to purchase, but it cost us 10% less in maintenance.

Track the actual maintenance cost for labor and material for each truck or piece of equipment. To ensure accuracy and reduce input time, the Equipment module is completely integrated with all other Bluegrass modules.

Key features include:

- Tracks fuel and oil for each piece of equipment
- Calculates depreciation automatically
- Prints a listing of vehicles due for state inspection
- Reports vehicles due license tag renewal
- Allows set up of preventative maintenance based on hour or mile interval, indicating next required service
- Provides detail report of all repairs and preventative maintenance for a piece of equipment for any time period
- Interfaces with Accounts Payable,
- Payroll, and Job Cost
- Operates stand-alone
- Track revenue by price of equipment.
- Charges equipment to jobs
- Different screens for on-road and off-road vehicles
- Unlimited number of pieces of equipment
- Tracks multiple serial numbers, and allows for comments
- Multiple billing by each piece of equipment plus “step rate” by the hour, day, week or month
- Revenue and cost summary and detail by each piece of equipment- month to date, year to date, and life to date
- Stores maintenance history and scheduled of maintenance on equipment and components by hours, miles, and date
- Ability to create invoices for equipment charges (rentals) to external groups, organization or companies

Customized GPS Fleet Tracking Solutions "For People On The Move"

- TrakPro offers the broadest range of Active and Passive GPS Fleet Tracking Systems, and Asset Management Telemetry Systems, to meet every industry need, at a very low cost, with options for professional installation and five-year maintenance plans.
- TrakPro's product solution kits include the fleet management software to handle unique data reporting requirements and standards such as State Mileage Reporting. This assists companies in regulatory compliance and provides the tools to gain greater efficiencies and profits in their daily business activities.
- TrakPro fleet management solutions include applications for: GPS Asset Control Systems with remote equipment monitoring and control; lost or stolen asset recovery; proactive alerting for preventative maintenance; and real-time monitoring of vehicle position and driver performance.
- TrakPro's Active Tracking Systems offer the most diverse suite of 2-way data communication networks, including global Satellite coverage, total North American coverage on the Cellemetry network, CDMA 1xRTT and GRPS cellular coverage, and coverage on Private and Public 2-Way radio communication networks.

KEY BENEFITS INCLUDE

“Turning position into knowledge and profit”

- Know your fleet’s physical location real-time, nationwide.
- Increased driver daily productivity (straighter paths to job, normal lunch times nearer to the job, less personal use/time, etc.) means more billable time every day.
- Reduce or eliminate "side jobs".
- Directly reduce fuel costs due to more efficient management of routes taken and other vehicle usage changes.
- Instant notification of aggressive driver speeding, activities in areas where they should not be, and after hours improper usage reduce risk.
- Improved billing accuracy (stop reporting shows exact time on site) increases income and handles customer concerns objectively.
- Reduced overtime due to higher productivity reduces costs.
- Monitor vehicle usage at night and on weekends..
- Alert notifications for vehicle movement.
- Monitor fleet driver habits
- Quickly find the closest vehicle to a client’s service request.
- Compare fleet units to one another to develop a production standard.
- Exception reports for specific sensors (engine temperature and transmission temperature)
